

## Environmental Policy

At FM Environmental we pride ourselves on over 30 years of leadership and success in the design, build, sale and commissioning of Pumping & Waste Water Treatment systems. Our systems suit not only the single domestic dwelling but also small communities, hotels, sports & social venues as part of a nationwide service. FM Environmental recognises the impact we have on the environment and through the implementation of an Environmental Management System we intend to strive to minimise those impacts as far as is reasonably practicable.

We will:

- ✚ Ensure continual improvement and prevent pollution within our activities, products, services and system.
- ✚ Monitor our activities to measure our performance.
- ✚ Set and review environmental objectives and targets.
- ✚ Comply with all regulatory and legislative requirements.
- ✚ Ensure all FM personnel are aware of their responsibility within the systems regarding environmental procedures and practices.
- ✚ Make our Environmental Policy readily available to the public.
